P0 Network outage in Japan P0

Active

Data service is unavailable for a majority of monitored devices on Partner A.

Detected 42 min ago | Duration 42 min | Updated 4 min ago | Incident ID QOS-2026-0038

Incident management

Assignee María N. · Carrier Operations

Status Active

Priority P0

Impact

Potentially affected travellers	Active travellers in Japan	Estimated impact	Affected monitored devices
11,300	16,620	68.0%	843 of 1,240

Business impact

Estimated from historical support and refund patterns · Updated 4 min ago

Forecasted	Forecasted	Observed	Observed
Expected support contacts	Expected refund exposure	Support contacts since detection	Refund requests
1,700–2,000	€10,800–€12,400	410 · 240% above baseline	126 · €7,560

What triggered this incident

Volume floor met · 1,240 measurements evaluated

Devices out of service	Data availability	Connection availability	Out-of-service events	Longest OOS duration
843 of 1,240	18%	22%	1,084	42 min

Data availability over time

Data availability (%) Normal availability (98%) Last 3 hours

Partner / Technology	Data availability	Status
Partner A · 4G/5G	18%	Outage
Partner B · 4G	96%	Healthy
Partner C · 5G	93%	Healthy

Recommended action

Escalate the outage to Partner A immediately. Data availability has fallen to 18%, and 843 of 1,240 monitored devices are out of service. Partners B and C remain healthy.

Affected scope

Destination	Japan
Network Operator	Partner A
Cellular technology	4G/5G
Geographic Scope	Country-wide
Data Source	nSpire live feed
Trigger source	nSpire OOS events

Incident History

09:41	09:45	10:00	Pending
Incident detected	**Slack alert sent**	**Incident remains active**	**Recovery validation pending**
Data availability collapsed across 843 monitored devices.	Notification sent to #qos-alerts channel.	Out-of-service events continue to rise.	Resolution becomes available after recovery is confirmed.
